Technical Information

Proline Promag 50W, 53W

Electromagnetic Flow Measuring System

Flow measurement in water or wastewater applications

Application

Electromagnetic flowmeter for bidirectional measurement of liquids with a minimum conductivity of $\geq 5 \mu\text{S}/\text{cm}$:

- Drinking water
- Wastewater
- Wastewater sludge
- Flow measurement up to 110,000 m^3/h
- Fluid temperature up to +80 °C
- Process pressures up to 40 bar
- Fitting lengths to DVGW/ISO

Application-specific lining materials:
■ Polyurethane and hard rubber

Approvals for hazardous area:
■ ATEX, FM, CSA

Lined measuring pipes with materials approved for drinking water:

- KTW, WRAS, NSF, ACS, etc.

Connection to process control system:

- HART, PROFIBUS DP/PA, FOUNDATION Fieldbus, MODBUS RS485

Your benefits

Promag measuring devices offer you cost-effective flow measurement with a high degree of accuracy for a wide range of process conditions.

The uniform **Proline transmitter concept** comprises:

- Modular device and operating concept resulting in a higher degree of efficiency
- Software options for electrode cleaning
- Uniform operating concept

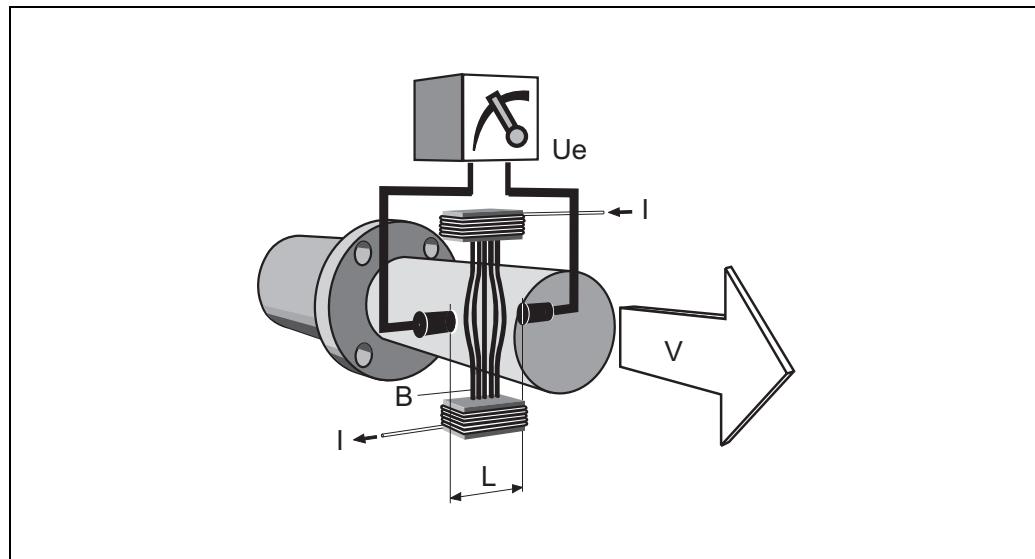

The tried-and-tested **Promag sensors** offer:

- No pressure loss
- Not sensitive to vibrations
- Simple installation and commissioning

Function and system design

Measuring principle

Faraday's law of induction states that a voltage is induced in a conductor moving in a magnetic field. In electromagnetic measuring, the flowing medium corresponds to the moving conductor. The induced voltage is proportional to the flow velocity and is detected by two measuring electrodes and transmitted to the amplifier. Flow volume is computed on the basis of the pipe's diameter. The constant magnetic field is generated by a switched direct current of alternating polarity.

A0003191

$$Ue = B \cdot L \cdot v$$

$$Q = A \cdot v$$

Ue = induced voltage

B = magnetic induction (magnetic field)

L = electrode gap

v = flow velocity

Q = volume flow

A = pipe cross-section

I = current strength

Measuring system

The measuring system consists of a transmitter and a sensor.

Two versions are available:

- Compact version: transmitter and sensor form a single mechanical unit.
- Remote version: transmitter and sensor are installed separately.

Transmitter:

- Promag 50 (user interface with push buttons for operation, two-line display)
- Promag 53 ("Touch Control" without opening the housing, four-line display)

Sensor:

- DN 25...2000

Input

Measured variable	Flow rate (proportional to induced voltage)
Measuring range	Typically $v = 0.01\ldots 10 \text{ m/s}$ with the specified measuring accuracy
Operable flow range	Over 1000 : 1
Input signal	<p>Status input (auxiliary input): $U = 3\ldots 30 \text{ V DC}$, $R_i = 5 \text{ k}\Omega$, galvanically isolated. Configurable for: totalizer(s) reset, measured value suppression, error-message reset.</p> <p>Status input (auxiliary input) with PROFIBUS DP and MODBUS RS485: $U = 3\ldots 30 \text{ V DC}$, $R_i = 3 \text{ k}\Omega$, galvanically isolated Switching level: $3\ldots 30 \text{ V DC}$, independent of polarity Configurable for: totalizer(s) reset, measured value suppression, error-message reset, batching start/stop (optional), batch totalizer reset (optional)</p> <p>Current input (for Promag 53 only): Active/passive selectable, galvanically isolated, full scale value selectable, resolution: $3 \mu\text{A}$, temperature coefficient: typ. $0.005\% \text{ o.r.}/^\circ\text{C}$ (o.r. = of reading) active: $4\ldots 20 \text{ mA}$, $R_i \leq 150 \Omega$, $U_{out} = 24 \text{ V DC}$, short-circuit-proof passive: $0/4\ldots 20 \text{ mA}$, $R_i \leq 150 \Omega$, $U_{max} = 30 \text{ V DC}$</p>

Output

Output signal	Promag 50
	<p>Current output: active/passive selectable, galvanically isolated, time constant selectable ($0.01\ldots 100 \text{ s}$), full scale value selectable, temperature coefficient: typ. $0.005\% \text{ o.r.}/^\circ\text{C}$ (o.r. = of reading), resolution: $0.5 \mu\text{A}$</p> <ul style="list-style-type: none"> ■ active: $0/4\ldots 20 \text{ mA}$, $R_L < 700 \Omega$ (HART: $R_L \geq 250 \Omega$) ■ passive: $4\ldots 20 \text{ mA}$, operating voltage $V_S 18\ldots 30 \text{ V DC}$, $R_i \leq 150 \Omega$ <p>Pulse/frequency output: passive, open collector, 30 V DC, 250 mA, galvanically isolated.</p> <ul style="list-style-type: none"> ■ Frequency output: full scale frequency $2\ldots 1000 \text{ Hz}$ ($f_{max} = 1250 \text{ Hz}$), on/off ratio 1:1, pulse width max. 10 s. ■ Pulse output: pulse value and pulse polarity selectable, max. pulse width configurable ($0.5\ldots 2000 \text{ ms}$) <p>PROFIBUS DP interface:</p> <ul style="list-style-type: none"> ■ Transmission technology (Physical Layer): RS485 in accordance with ANSI/TIA/EIA-485-A: 1998, galvanically isolated ■ Profile version 3.0 ■ Data transmission rate: $9.6 \text{ kBaud}\ldots 12 \text{ MBaud}$ ■ Automatic data transmission rate recognition ■ Function blocks: 1 x analog input, 3 x totalizer ■ Output data: volume flow, totalizer ■ Input data: positive zero return (ON/OFF), totalizer control, value for local display ■ Cyclic data transmission compatible with previous model "Promag 33" ■ Bus address adjustable via miniature switches or local display (optional) at the measuring device

PROFIBUS PA interface:

- Transmission technology (Physical Layer): IEC 61158-2 (MBP), galvanically isolated
- Profile version 3.0
- Current consumption: 11 mA
- Permissible supply voltage: 9...32 V
- Bus connection with integrated reverse polarity protection
- Error current FDE (Fault Disconnection Electronic): 0 mA
- Function blocks: 1 x analog input, 1 x totalizer
- Output data: volume flow, totalizer
- Input data: positive zero return (ON/OFF), control totalizer, value for local display
- Cyclic data transmission compatible with previous model "Promag 33"
- Bus address adjustable via miniature switches or local display (optional) at the measuring device

Promag 53

Current output:

active/passive selectable, galvanically isolated, time constant selectable (0.01...100 s),
 full scale value selectable, temperature coefficient: typically 0.005% o.r./°C (o.r. = of reading),
 resolution: 0.5 μ A

- active: 0/4...20 mA, $R_L < 700 \Omega$ (HART: $R_L \geq 250 \Omega$)
- passive: 4...20 mA, operating voltage V_S 18...30 V DC, $R_i \leq 150 \Omega$

Pulse/frequency output:

active/passive selectable, galvanically isolated (Ex i version: only passive)

- active: 24 V DC, 25 mA (max. 250 mA during 20 ms), $R_L > 100 \Omega$
- passive: open collector, 30 V DC, 250 mA
- Frequency output: full scale frequency 2...10000 Hz ($f_{max} = 12500$ Hz), EEx-ia: 2...5000 Hz;
 on/off ratio 1:1; pulse width max. 10 s.
- Pulse output: pulse value and pulse polarity adjustable, pulse width configurable
 (0.05...2000 ms)

PROFIBUS DP interface:

- Transmission technology (Physical Layer): RS485 in accordance with ANSI/TIA/EIA-485-A: 1998, galvanically isolated
- Profile version 3.0
- Data transmission rate: 9.6 kBaud...12 MBaud
- Automatic data transmission rate recognition
- Function blocks: 2 x analog input, 3 x totalizer
- Output data: volume flow, calculated mass flow, totalizer 1...3
- Input data: positive zero return (ON/OFF), totalizer control, value for local display
- Cyclic data transmission compatible with previous model "Promag 33"
- Bus address adjustable via miniature switches or local display (optional) at the measuring device
- Available output combination → Page 7 ff.

PROFIBUS PA interface:

- Transmission technology (Physical Layer): IEC 61158-2 (MBP), galvanically isolated
- Profile version 3.0
- Current consumption: 11 mA
- Permissible supply voltage: 9...32 V
- Bus connection with integrated reverse polarity protection
- Error current FDE (Fault Disconnection Electronic): 0 mA
- Function blocks: 2 x analog input, 3 x totalizer
- Output data: volume flow, calculated mass flow, totalizer 1...3
- Input data: positive zero return (ON/OFF), totalizer control, value for local display
- Cyclic data transmission compatible with previous model "Promag 33"
- Bus address adjustable via miniature switches or local display (optional) at the measuring device

MODBUS interface:

- Transmission technology (Physical Layer): RS485 in accordance with ANSI/TIA/EIA-485-A: 1998, galvanically isolated
- MODBUS device type: Slave
- Address range: 1...247
- Bus address adjustable via miniature switches or local display (optional) at the measuring device
- Supported MODBUS function codes: 03, 04, 06, 08, 16, 23
- Broadcast: supported with the function codes 06, 16, 23
- Transmission mode: RTU oder ASCII
- Supported baudrate: 1200, 2400, 4800, 9600, 19200, 38400, 57600, 115200 Baud
- Response time:
Direct data access = typically 25...50 ms
Auto-scan buffer (data range) = typically 3...5 ms
- Available output combination → Page 7 ff.

FOUNDATION Fieldbus interface:

- FOUNDATION Fieldbus H1
- Transmission technology (Physical Layer): IEC 61158-2 (MBP), galvanically isolated
- ITK version 4.01
- Current consumption: 12 mA
- Error current FDE (Fault Disconnection Electronic): 0 mA
- Bus connection with integrated reverse polarity protection
- Function blocks: 5 x analog input, 1 x discrete output, 1 x PID
- Output data: volume flow, calculated mass flow, temperature, totalizer 1...3
- Input data: positive zero return (ON/OFF), reset totalizer
- Link Master (LM) functionality is supported

Signal on alarm	<ul style="list-style-type: none"> ■ Current output → failure response selectable (e.g. in accord. with NAMUR Recom. NE 43) ■ Pulse/frequency output → failure response selectable ■ Status output (Promag 50) → non-conductive by fault or power supply failure ■ Relay output (Promag 53) → de-energized by fault or power supply failure
------------------------	---

Load	See "Output signal"
-------------	---------------------

Switching output	<p>Status output (Promag 50, Promag 53): Open collector, max. 30 V DC / 250 mA, galvanically isolated. Configurable for: error messages, Empty Pipe Detection (EPD), flow direction, limit values.</p>
-------------------------	--

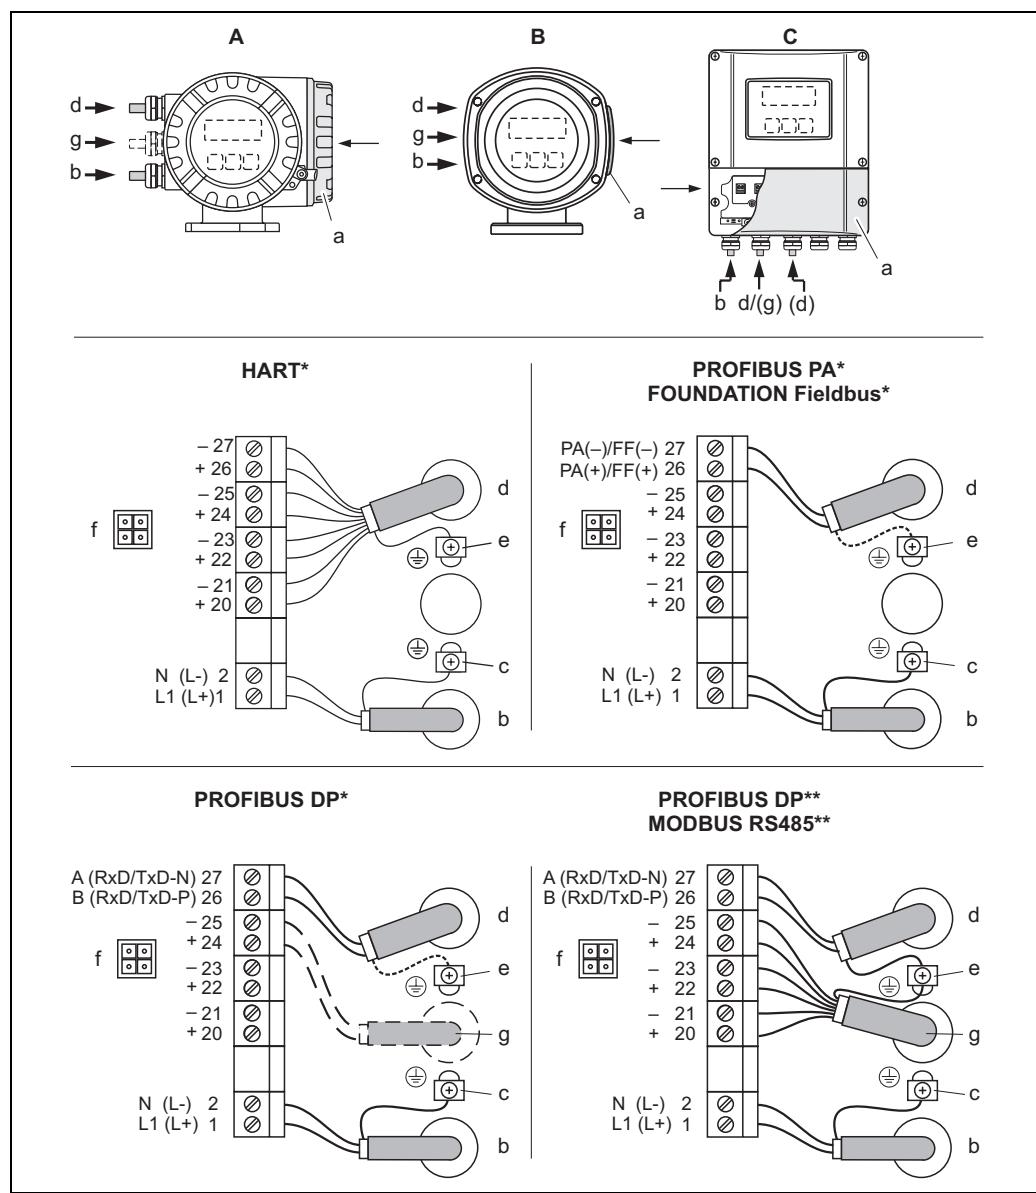

Relay outputs (Promag 53):	Normally closed (NC or break) or normally open (NO or make) contacts available (default: relay 1 = NO, relay 2 = NC), max. 30 V / 0.5 A AC; 60 V / 0.1 A DC, galvanically isolated. Configurable for: error messages, Empty Pipe Detection (EPD), flow direction, limit values, batching contacts.
-----------------------------------	---

Low flow cutoff	Switch points for low flow cutoff are selectable
------------------------	--

Galvanic isolation	All circuits for inputs, outputs, and power supply are galvanically isolated from each other.
---------------------------	---

Electrical connection remote version

Cable entry

Power-supply and signal cables (inputs/outputs):

- Cable entry M20 x 1.5 (8...12 mm)
- Sensor cable entry for armoured cables M20 x 1.5 (9.5...16 mm)
- Threads for cable entries 1/2" NPT, G 1/2"

Connecting cable for remote version:

- Cable entry M20 x 1.5 (8...12 mm)
- Sensor cable entry for armoured cables M20 x 1.5 (9.5...16 mm)
- Threads for cable entries 1/2" NPT, G 1/2"

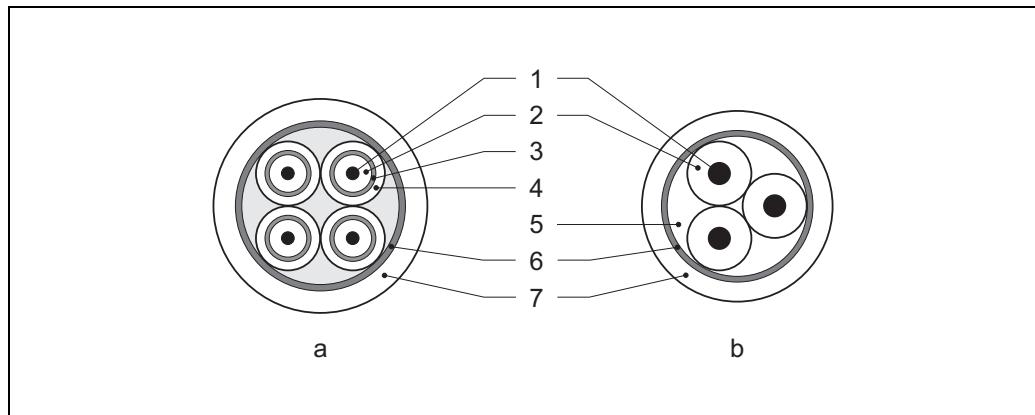

**Cable specifications
remote version**

Coil cable:

- 2 x 0.75 mm² PVC cable with common, braided copper shield (Ø approx. 7 mm)
- Conductor resistance: ≤ 37 Ω/km
- Capacitance: core/core, shield grounded: ≤ 120 pF/m
- Permanent operating temperature: -20...+80 °C
- Cable cross-section: max. 2.5 mm²

Signal cable:

- 3 x 0.38 mm² PVC cable with common, braided copper shield (Ø approx. 7 mm) and individually shielded cores.
- With Empty Pipe Detection (EPD): 4 x 0.38 mm² PVC cable with common, braided copper shield (Ø approx. 7 mm) and individually shielded cores.
- Conductor resistance: ≤ 50 Ω/km
- Capacitance: core/shield: ≤ 420 pF/m
- Permanent operating temperature: -20...+80 °C
- Cable cross-section: max. 2.5 mm²

A0003194

a = signal cable, b = coil current cable (cross-section: max. 2.5 mm²)

*1 = core, 2 = core insulation, 3 = core shield, 4 = core jacket, 5 = core strengthening,
6 = cable shield, 7 = outer jacket*

Optionally, Endress+Hauser also supplies reinforced connecting cables with an additional, metal strengthening braid. We recommend such cables for the following cases:

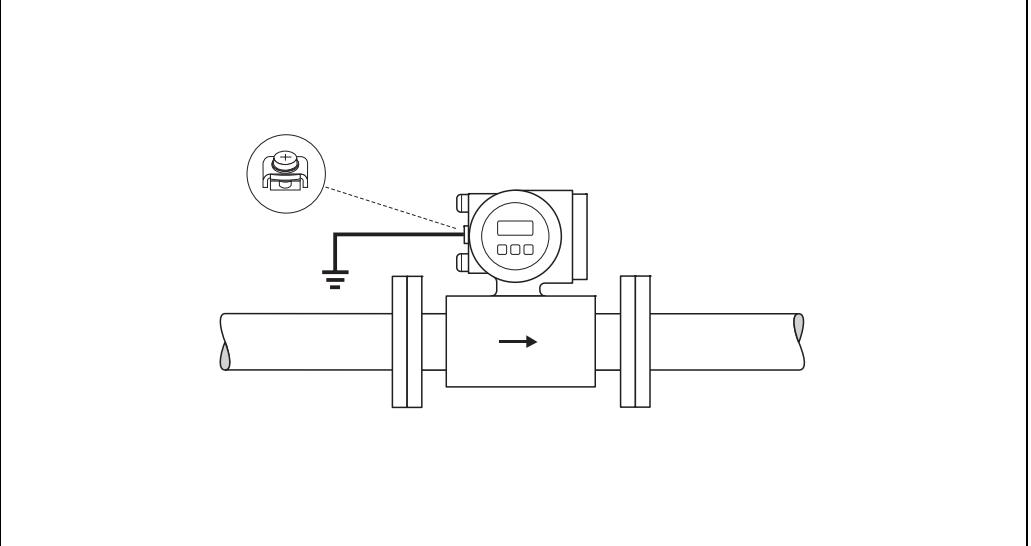

- Cables laid underground
- Danger of rodent attack
- Device used with ingress protection IP 68

Operation in zones of severe electrical interference:

The measuring device complies with the general safety requirements in accordance with EN 61010, the EMC requirements of EN 61326/A1, and NAMUR Recommendation NE 21.

Caution!

Grounding is by means of the ground terminals provided for the purpose inside the connection housing. Keep the stripped and twisted lengths of cable shield to the terminals as short as possible.

Supply voltage	85...260 V AC, 45...65 Hz 20...55 V AC, 45...65 Hz 16...62 V DC
	PROFIBUS PA and FOUNDATION Fieldbus Non-Ex: 9...32 V DC Ex i: 9...24 V DC Ex d: 9...32 V DC
Power consumption	AC: <15 VA (including sensor) DC: <15 W (including sensor)
	Switch-on current: ■ max. 13.5 A (< 50 ms) at 24 V DC ■ max. 3 A (< 5 ms) at 260 V AC
Power supply failure	Lasting min. 1 power cycle: ■ EEPROM or T-DAT (Promag 53 only) retain the measuring system data in the event of a power supply failure ■ S-DAT: exchangeable data storage chip which stores the data of the sensor (nominal diameter, serial number, calibration factor, zero point etc.)
Potential equalisation	<p>Standard case</p> <p>Perfect measurement is only ensured when the medium and the sensor have the same electrical potential. Most Promag sensors have a standard installed reference electrode which guarantees the required connection. This usually means that additional potential matching measures are unnecessary.</p> <p>Note! For installation in metal pipes, it is advisable to connect the ground terminal of the transmitter housing to the piping. Also, observe company-internal grounding guidelines.</p>  <p>A0004375</p>

Caution!

For sensors without reference electrodes or without metal process terminals, carry out potential matching as per the instructions for special cases described below. These special measures are particularly important when standard grounding practice cannot be ensured or extremely strong matching currents are expected.

Metal, ungrounded piping

In order to prevent outside influences on measurement, it is advisable to use ground cables to connect each sensor flange to its corresponding pipe flange and ground the flanges. Connect the transmitter or sensor connection housing, as applicable, to ground potential means of the ground terminal provided for the purpose.

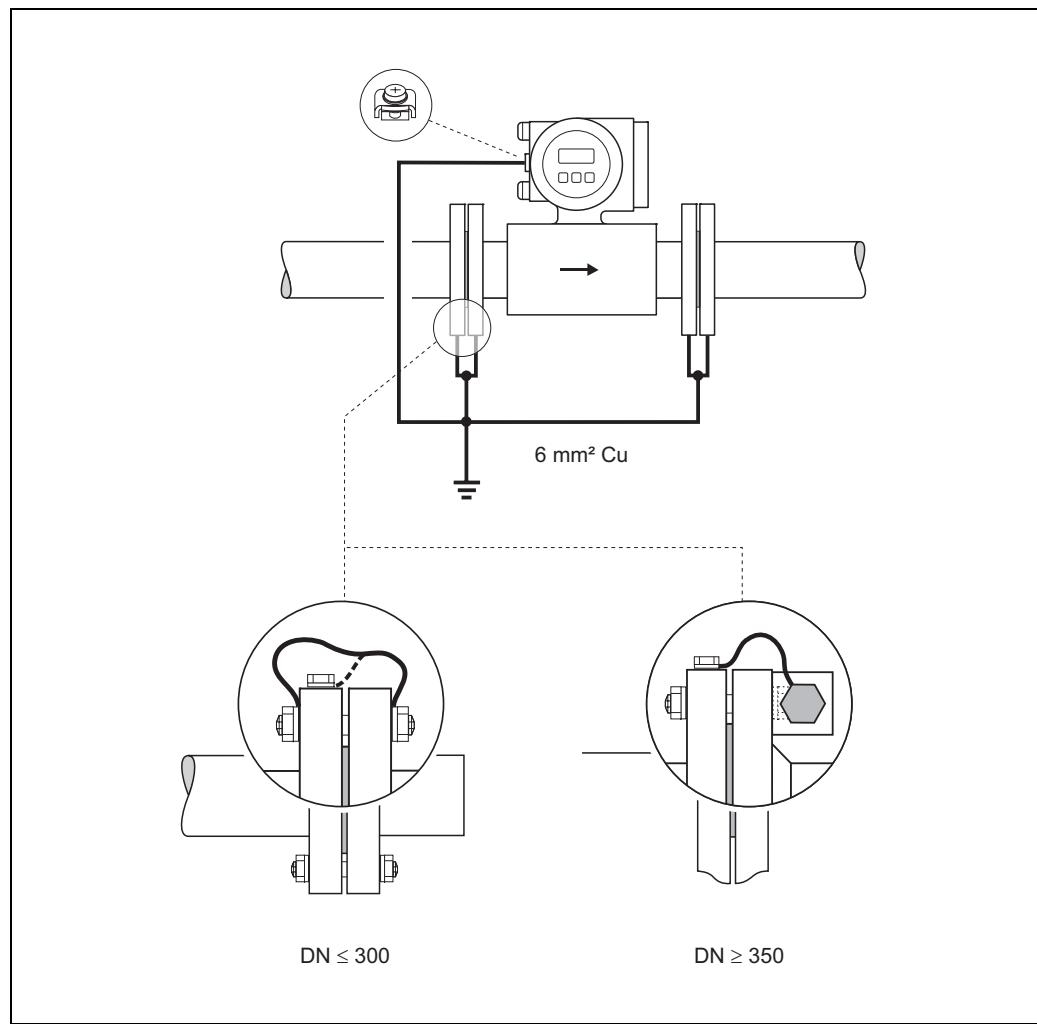

Caution!

Also, observe company-internal grounding guidelines.

Note!

The ground cable for flange-to-flange connections can be ordered separately as an accessory from Endress+Hauser.

- DN \leq 300: The ground cable is in direct connection with the conductive flange coating and is secured by the flange screws.
- DN \geq 350: The ground cable connects directly to the metal transport bracket.

A0004376

Plastic pipes and isolating lined pipes

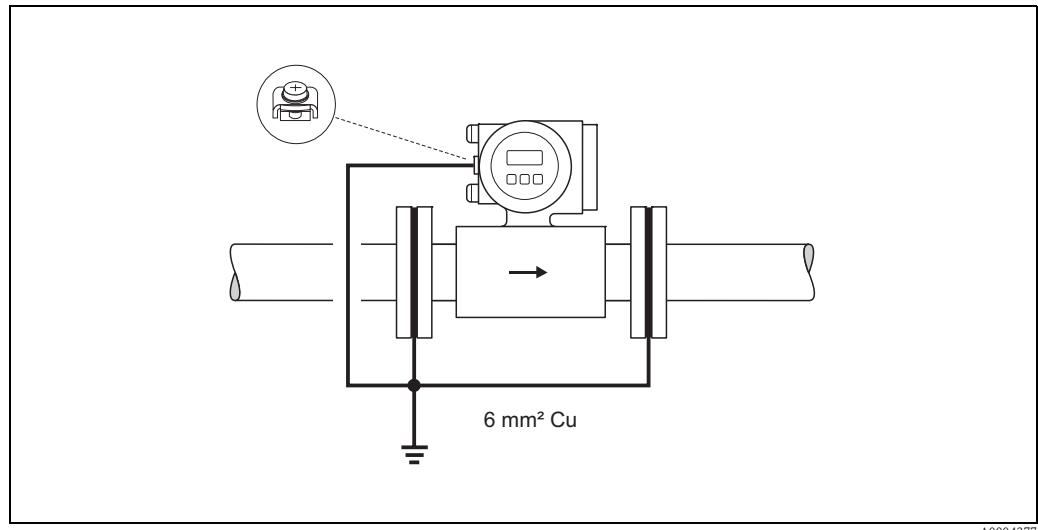

Normally, potential is matched using the reference electrodes in the measuring tube. However, in exceptional cases it is possible that, due to the grounding plan of a system, large matching currents flow over the reference electrodes. This can lead to destruction of the sensor, e.g. through electrochemical decomposition of the electrodes. In such cases, e.g. for fibre-glass or PVC piping, it is recommended that you use additional ground disks for potential matching.

When using ground disks, note the following points:

- Ground disks (DN 15...300) can be ordered separately from Endress+Hauser as an accessory.
- Ground disks (incl. seals) increase the installation length. You can find the dimensions of ground disks on Page 30.

Caution!

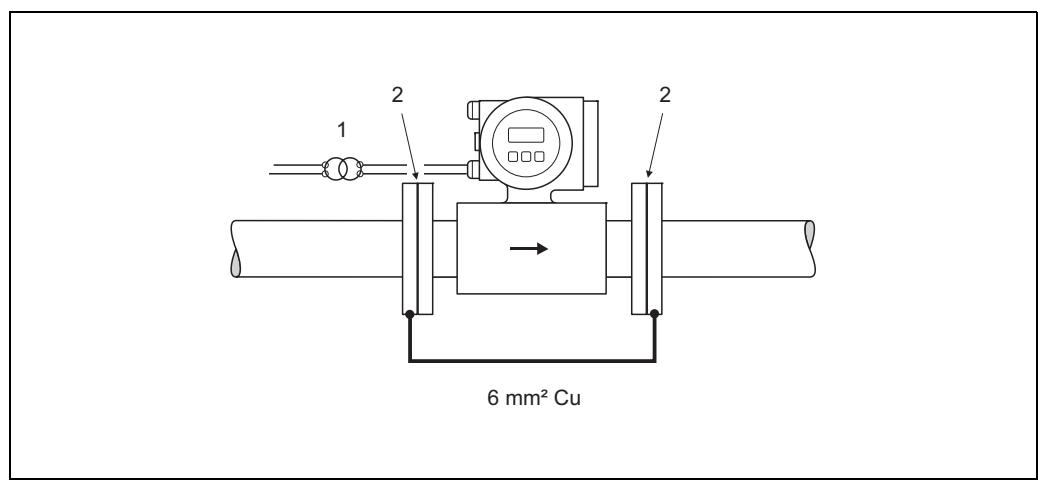

- Risk of damage from electrochemical corrosion. Note the electrochemical insulation rating, if the ground disks and measuring electrodes are made of different materials.
- Also, observe company-internal grounding guidelines.

Pipes with cathodic protection

In such cases, install the measuring instrument without potential in the piping:

- When installing the measuring device, make sure that there is an electrical connection between the two piping runs (copper wire, 6 mm²).
- Make sure that the installation materials do not establish a conductive connection to the measuring device and that the installation materials withstand the tightening torques applied when the threaded fasteners are tightened.
- Also comply with the regulations applicable to potential-free installation.

1 = isolating transformer, 2 = electrically insulated

Performance characteristics

Reference operating conditions

To DIN EN 29104 and VDI/VDE 2641:

- Medium temperature: $+28^{\circ}\text{C} \pm 2\text{ K}$
- Ambient temperature: $+22^{\circ}\text{C} \pm 2\text{ K}$
- Warm-up period: 30 minutes

Installation:

- Inlet run $>10 \times \text{DN}$
- Outlet run $>5 \times \text{DN}$
- Sensor and transmitter grounded.
- Sensor centred relative to the pipe.

Maximum measured error

Promag 50:

Pulse output: $\pm 0.5\%$ o.r. $\pm 1 \text{ mm/s}$ (o.r. = of reading)

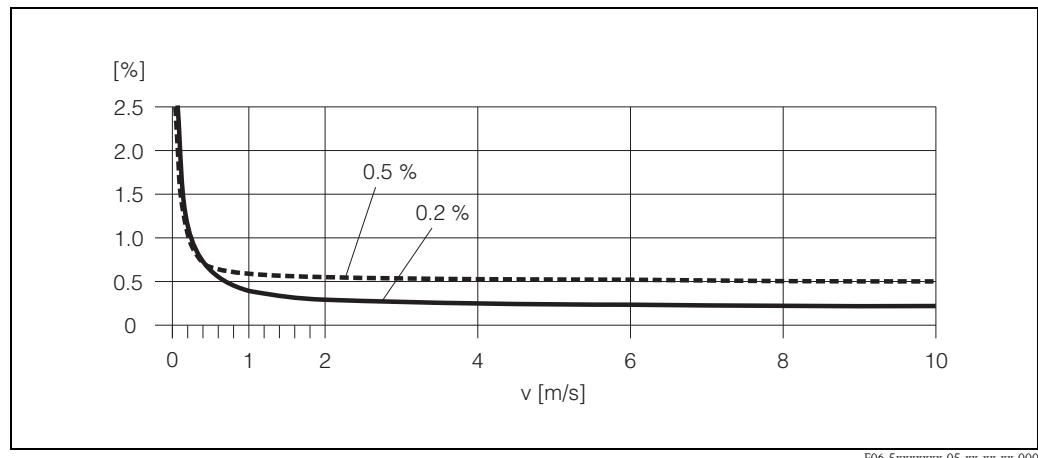

Current output: plus typically $\pm 5 \mu\text{A}$

Promag 53:

Pulse output: $\pm 0.2\%$ o.r. $\pm 2 \text{ mm/s}$ (o.r. = of reading)

Current output: plus typically $\pm 5 \mu\text{A}$

Supply voltage fluctuations have no effect within the specified range.

Repeatability

max. $\pm 0.1\%$ o.r. $\pm 0.5 \text{ mm/s}$ (o.r. = of reading)

Operating conditions

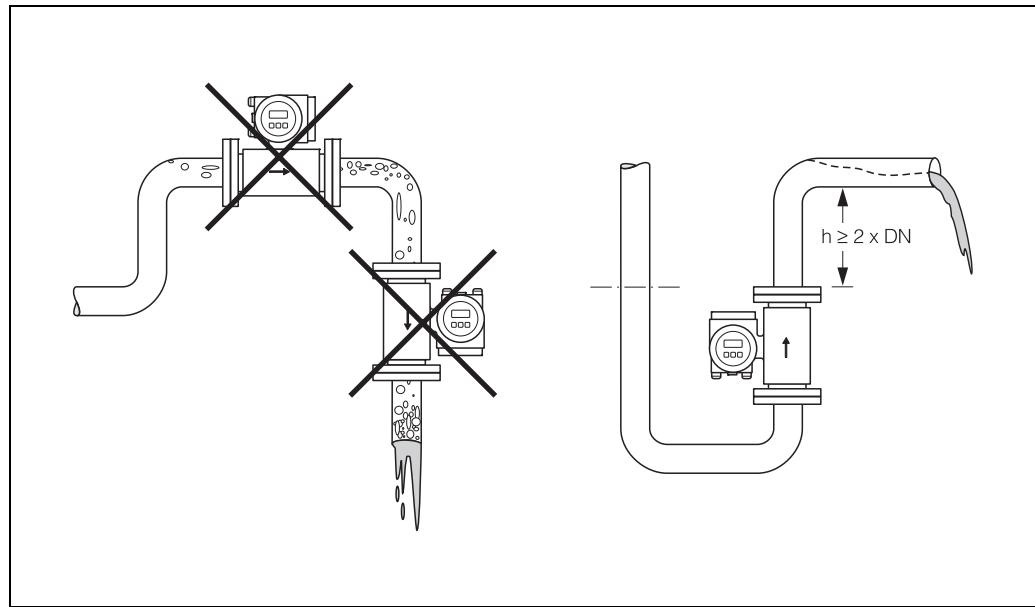

Installation conditions

Installation instructions

Mounting location

Correct measuring is possible only if the pipe is full. Avoid the following locations:

- Highest point of a pipeline. Risk of air accumulating
- Directly upstream of a free pipe outlet in a vertical pipe.

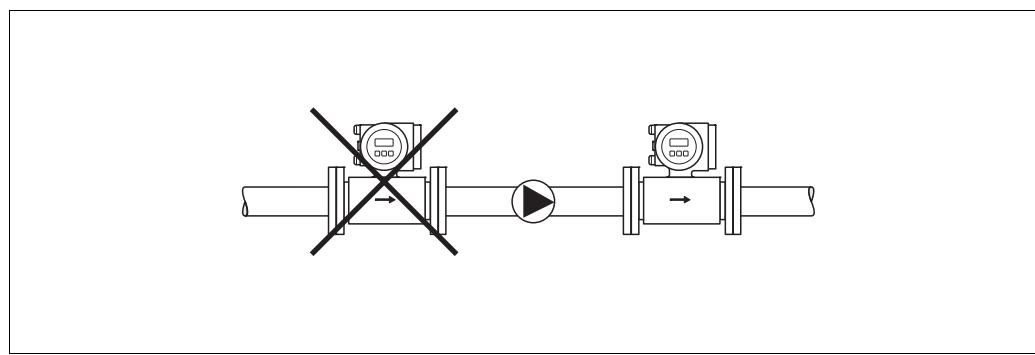

F06-5xxxxxxxx-11-00-00-xx-000

Installation of pumps

Do not install the sensor on the intake side of a pump. This precaution is to avoid low pressure and the consequent risk of damage to the lining of the measuring tube. Information on the lining's resistance to partial vacuum can be found on Page 20.

It might be necessary to install pulse dampers in systems incorporating reciprocating, diaphragm or peristaltic pumps. Information on the measuring system's resistance to vibration and shock can be found on Page 20.

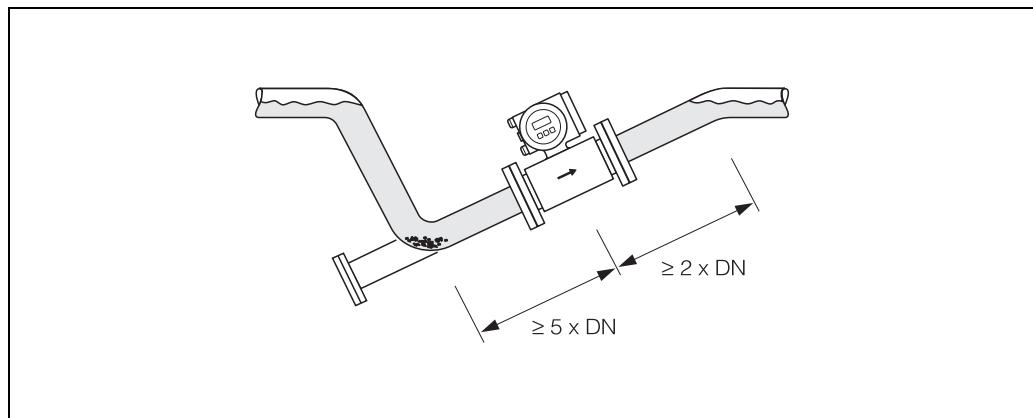

F06-5xxxxxxxx-11-00-00-xx-001

Partially filled pipes

Partially filled pipes with gradients necessitate a drain-type configuration. The Empty Pipe Detection (EPD) function offers additional protection by detecting empty or partially filled pipes.

Caution!

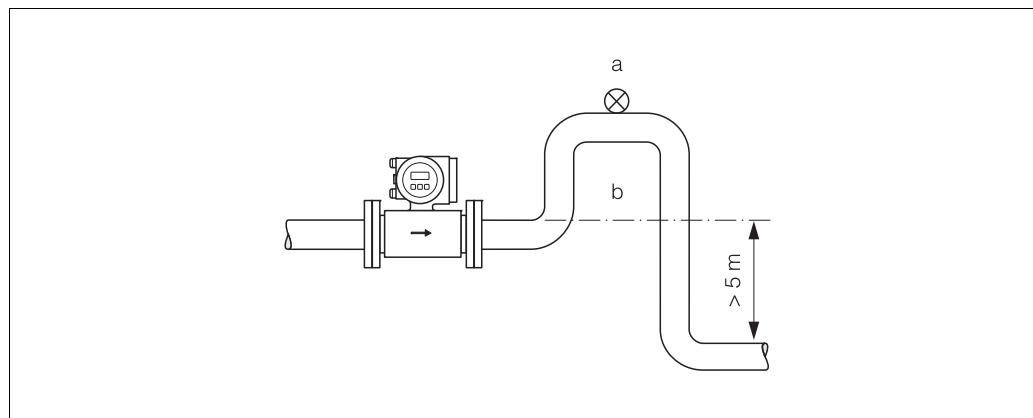

Risk of solids accumulating. Do not install the sensor at the lowest point in the drain. It is advisable to install a cleaning valve.

F06-5xxxxxxxx-11-00-00-xx-002

Vertical pipes

Install a siphon (b) or a vent valve (a) downstream of the sensor in vertical pipes longer than 5 meters. This precaution is to avoid low pressure and the consequent risk of damage to the lining of the measuring tube. These measures also prevent the system losing prime, which could cause air inclusions. Information on the lining's resistance to partial vacuum can be found on Page 20.

F06-5xxxxxxxx-11-00-00-xx-003

a = vent valve, b = siphon

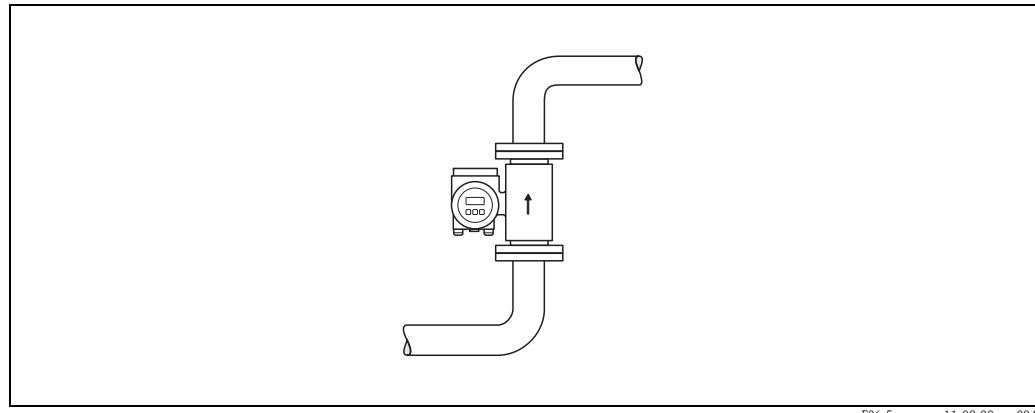

Orientation

An optimum orientation helps avoid gas and air accumulations and deposits in the measuring tube. Promag, nevertheless, supplies a range of options and accessories for correct measuring of problematic media:

- Electrode Cleaning Circuitry (ECC) to remove electrically conductive deposits in the measuring tube, e.g. in accretive media.
- Empty Pipe Detection (EPD) for recognition of partially filled measuring tubes, or for degassing media or for applications with fluctuating process pressure.
- Exchangeable measuring electrodes for abrasive media.

Vertical orientation:

This orientation is ideal for self-emptying piping systems and for use in conjunction with Empty Pipe Detection.

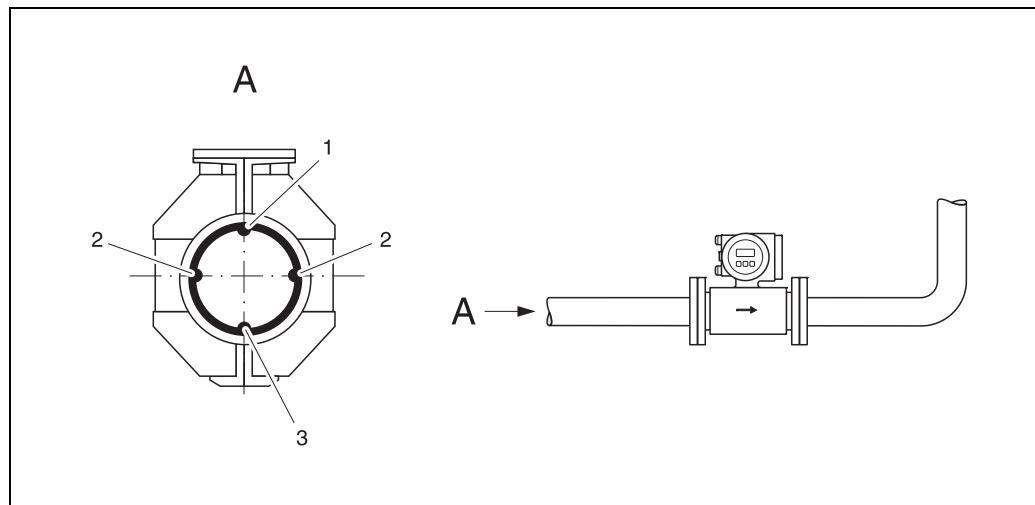

F06-5xxxxxxxx-11-00-00-xx-004

Horizontal orientation:

The measuring electrode-plane should be horizontal. This prevents brief insulation of the two electrodes by entrained air bubbles.

Caution!

Empty Pipe Detection functions correctly only when the measuring device is installed horizontally and the transmitter housing is facing upward. Otherwise there is no guarantee that Empty Pipe Detection will respond if the measuring tube is only partially filled or empty.

F06-5xxxxxxxx-11-00-xx-004

1 = EPD electrode (Empty Pipe Detection)

2 = Measuring electrodes (signal detection)

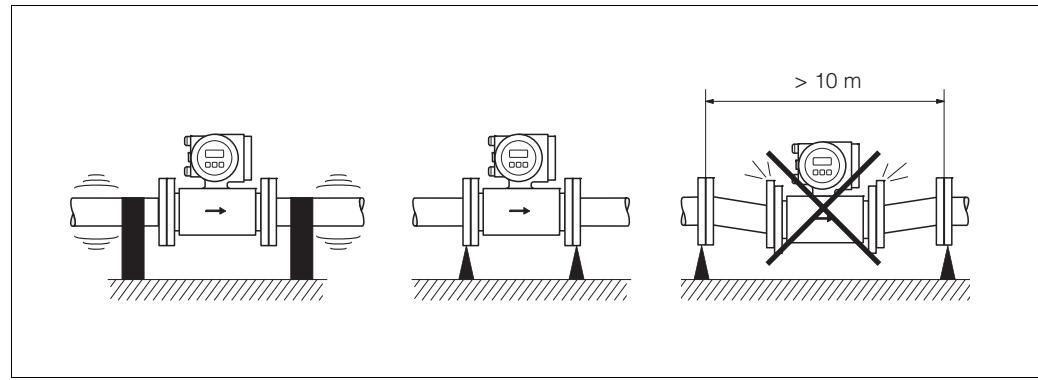

3 = Reference electrode (potential equalisation)

Vibrations

Secure the piping and the sensor if vibration is severe.

Caution!

It is advisable to install sensor and transmitter separately if vibration is excessively severe. Information on resistance to vibration and shock can be found on page 20.

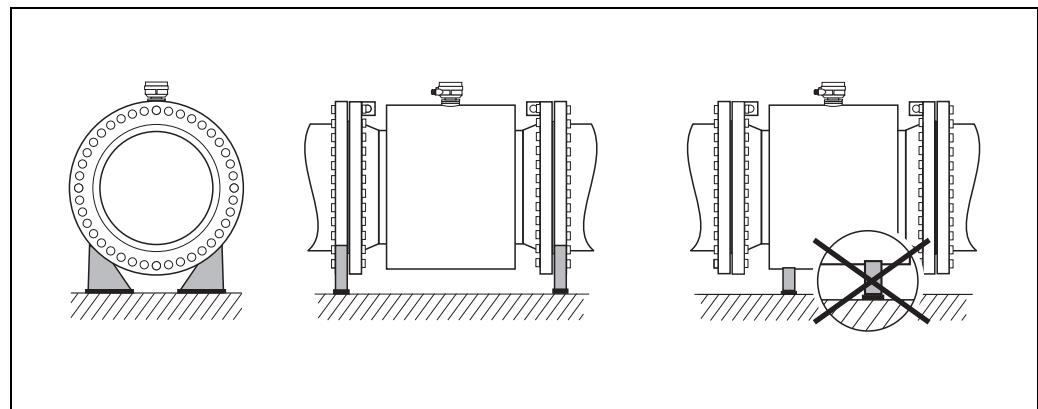

F06-5xxxxxxxx-11-00-00-xx-000

Foundations, supports

If the nominal diameter is $DN \geq 350$, mount the transmitter on a foundation of adequate load-bearing strength.

Caution!

Do not allow the casing to take the weight of the sensor. This would buckle the casing and damage the internal magnetic coils.

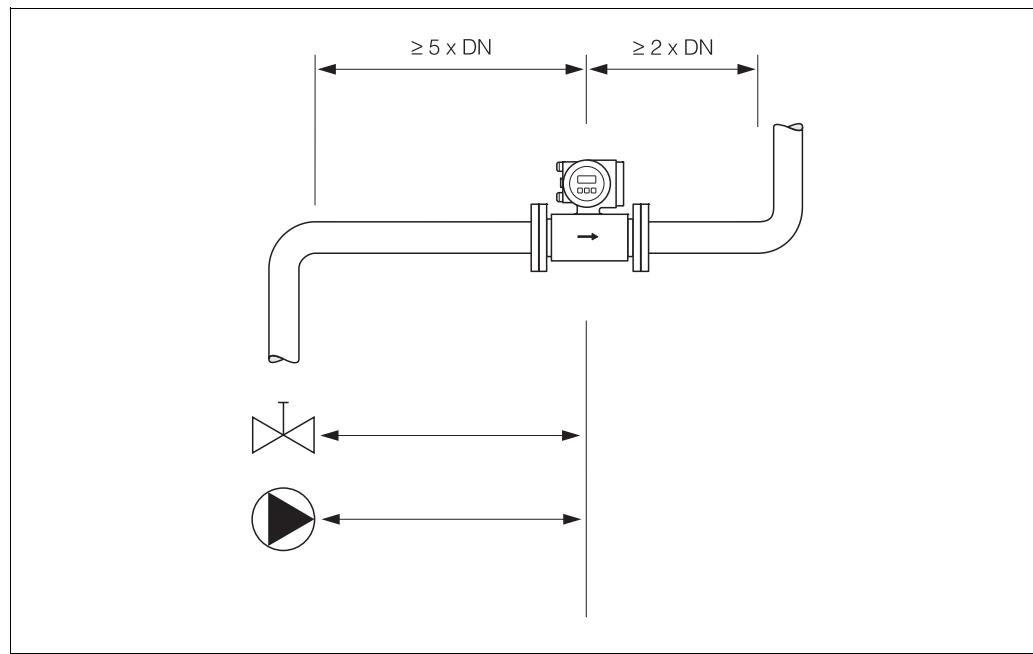

F06-5xFxxxxx-11-05-xx-xx-000

Inlet and outlet runs

If possible, install the sensor well clear of fittings such as valves, T-pieces, elbows, etc. Compliance with the following requirements for the inlet and outlet runs is necessary in order to ensure measuring accuracy:

- Inlet run $\geq 5 \times \text{DN}$
- Outlet run $\geq 2 \times \text{DN}$

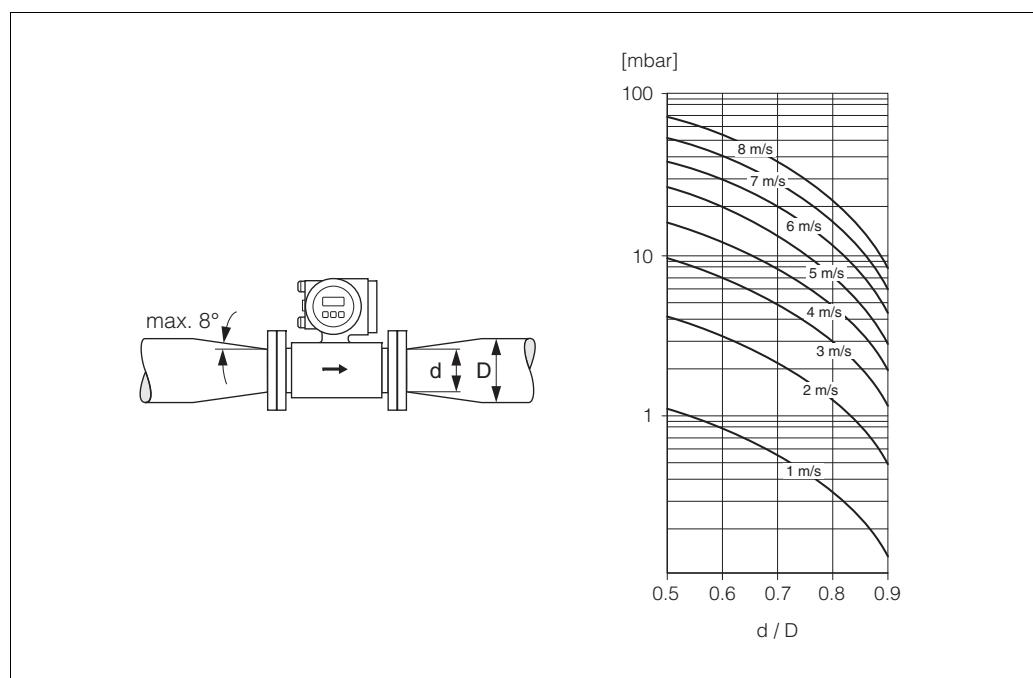

F06-5xxxxxxxx-11-00-00-xx-005

Adapters

Suitable adapters to DIN EN 545 (double flange junction sections) can be used to install the sensor in larger-diameter pipes. The resultant increase in the rate of flow improves measuring accuracy with very slow-moving fluids.

The nomogram shown here can be used to calculate the pressure loss caused by reducers and expanders. The nomogram applies only to fluids of viscosity similar to water.

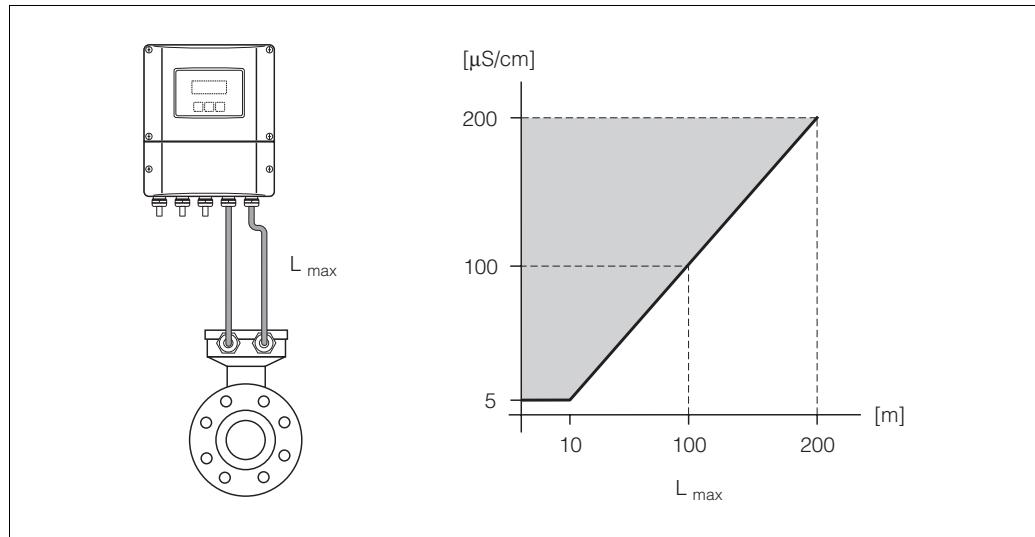

1. Calculate the ratio of the diameters d/D .
2. From the nomogram read off the pressure loss as a function of flow velocity (downstream from the reduction) and the d/D ratio.

F06-5xxxxxxxx-05-05-xx-xx-000

Length of connecting cable

Permissible cable length L_{max} depends on the conductivity of the medium. A minimum conductivity of 20 $\mu\text{S}/\text{cm}$ is required for measuring demineralized water.

F06-5xxxxxxxx-05-xx-xx-xx-006

Gray shaded area = permissible range for medium conductivity

L_{max} = length of connecting cable in [m]

Medium conductivity in $[\mu\text{S}/\text{cm}]$

In order to ensure measuring accuracy, moreover, comply with the following instructions when installing the remote version:

- Secure the cable run or route the cable in a conduit. Movement of the cable can falsify the measuring signal, particularly if the conductivity of the medium is low.
- Route the cable well clear of electrical machines and switching elements.
- Ensure potential equalisation between sensor and transmitter, if necessary.

Environment

Ambient temperature

Transmitter:

- Standard: $-20...+60\text{ }^\circ\text{C}$
- Optional: $-40...+60\text{ }^\circ\text{C}$

Note!

At ambient temperatures below $-20\text{ }^\circ\text{C}$ the readability of the display may be impaired.

Sensor:

- Flange material carbon steel: $-10...+60\text{ }^\circ\text{C}$
- Flange material stainless steel: $-40...+60\text{ }^\circ\text{C}$

Caution!

It is not allowed to use the device beyond the min. and max. lining specified temperature values (→ “Medium temperature range”).

Note the following points:

- Install the device at a shady location. Avoid direct sunlight, particularly in warm climatic regions.
- If both fluid and ambient temperatures are high, install the transmitter at a remote location from the sensor (→ “Medium temperature range”).

Storage temperature

- The storage temperature corresponds to the ambient temperature range of the transmitter and sensor (see “Ambient temperature”).
- The measuring device must be protected against direct sunlight during storage in order to avoid unacceptably high surface temperatures.
- Choose a storage location where moisture does not collect in the measuring device. This will help prevent fungus and bacteria infestation which can damage the liner.
- Do not remove the protective plates or caps on the process connections until you are ready to install the device.

Degree of protection	<ul style="list-style-type: none"> ■ Standard: IP 67 (NEMA 4X) for transmitter and sensor ■ Optional: IP 68 (NEMA 6P) for sensor in remote version
-----------------------------	--

Shock and vibration resistance	Acceleration up to 2 g by analogy with IEC 60068-2-6.
---------------------------------------	---

Electromagnetic compatibility (EMC)	To EN 61326/A1 and NAMUR recommendation NE 21.
--	--

Process conditions

Medium temperature range	The permissible medium temperature depends on the measuring-tube lining:
	<ul style="list-style-type: none"> ■ 0...+80 °C for hard rubber (DN 65...2000) ■ -20...+50 °C for polyurethane (DN 25...1000)

Conductivity	Minimum conductivity: ≥ 5 µS/cm for liquids generally ≥ 20 µS/cm for demineralised water
---------------------	--

Note that in the case of the remote version, the minimum conductivity is also influenced by the length of the connecting cable → see "Length of connecting cable"

Medium pressure range (nominal pressure)	EN 1092-1 (DIN 2501): PN 6 (DN 1200...2000) PN 10 (DN 200...2000) PN 16 (DN 65...2000) PN 25 (DN 200...1000) PN 40 (DN 25...150)
---	---

ANSI B16.5:
Class 150 (1...24")
Class 300 (1...6")

AWWA:
Class D (28...78")

	65...2000	3...78"	Hard rubber	0	0	0	—	—	—	—

Limiting flow

The diameter of the pipe and the flow rate determine the nominal diameter of the sensor. The optimum velocity of flow is 2...3 m/s. The velocity of flow (v), moreover, has to be matched to the physical properties of the medium:

- $v < 2$ m/s: for abrasive mediums such as potter's clay, lime milk, ore slurry, etc.
- $v > 2$ m/s: for accretive mediums such as wastewater sludge, etc.

Mechanical construction

Design / dimensions

Dimensions: Wall-mount housing (non hazardous area and II3G / zone 2)

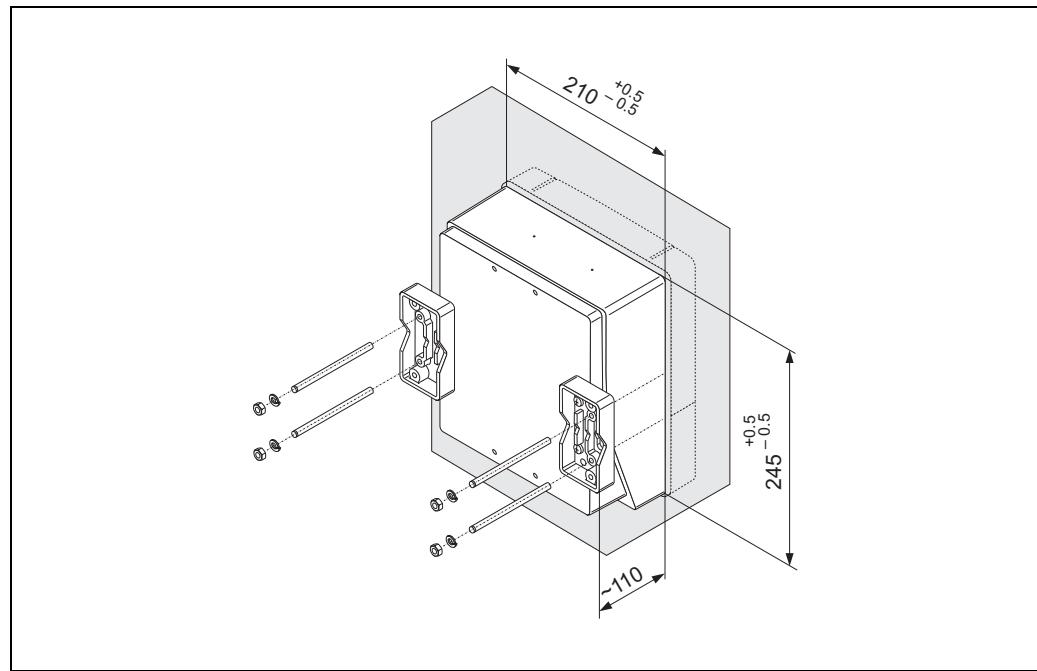

Dimensions: Remote field housing (II2GD / zone 1)

There is a separate mounting kit for the wall-mounted housing. It can be ordered from Endress+Hauser as an accessory. The following installation variants are possible:

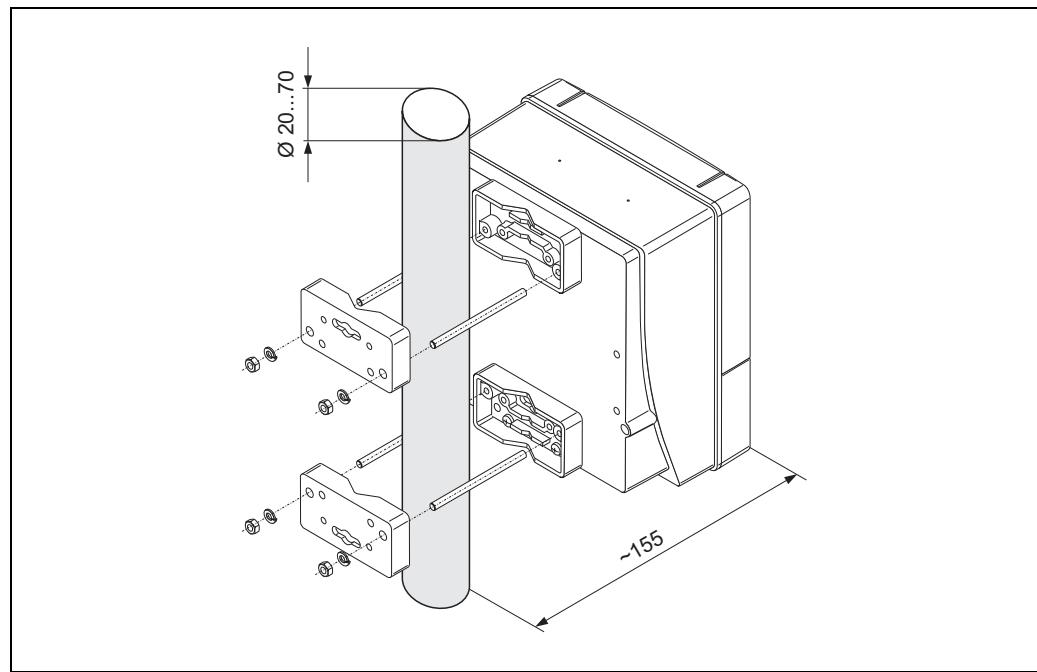

- Panel-mounted installation
- Pipe mounting

Panel-mounted installation

Transmitter Promag (compact version): 3.4 kg
(Weight data valid for standard pressure ratings and without packaging material)
* Only DN 80, 100, 150...400, 500 and 600 are available if flanges according to AS are used.

Materials

Transmitter housing:

- Compact housing: powder coated die-cast aluminium
- Wall-mounted housing: powder coated die-cast aluminium

Sensor housing:

- DN 25...300: powder-coated die-cast aluminium
- DN 350...2000: painted steel (Amerlock 400)

Measuring tube:

- DN < 350: stainless steel 1.4301 or 1.4306/304L; non-stainless flange material with Al/Zn protective coating
- DN > 300: stainless steel 1.4301/304; non-stainless flange material with Amerlock 400 paint

Flange:

- EN 1092-1 (DIN 2501): 316L / 1.4571; RSt37-2 (S235JRG2) / C22 / FE 410W B
(with flanges made of carbon steel: DN < 350 with Al/Zn protective coating;
DN > 300 with Amerlock 400 paint)
- ANSI: A105, F316L
(with flanges made of carbon steel: DN < 350 with Al/Zn protective coating;
DN > 300 with Amerlock 400 paint)
- AWWA: 1.0425 (with Amerlock 400 paint)
- JIS: RSt37-2 (S235JRG2) / H II / 1.0425 / 316L
(with flanges made of carbon steel: DN < 350 with Al/Zn protective coating;
DN > 300 with Amerlock 400 paint)
- AS 2129: (DN 150, 200, 250, 300, 600) A105 or RSt37-2 (S235JRG2)
(DN 80, 100, 350, 400, 500) A105 or St44-2 (S275JR)
(with flanges made of carbon steel: DN < 350 with Al/Zn protective coating;
DN > 300 with Amerlock 400 paint)
- AS 4087: A105 or St44-2 (S275JR)
(with flanges made of carbon steel: DN < 350 with Al/Zn protective coating;
DN > 300 with Amerlock 400 paint)

Ground disks: 1.4435/316L or Alloy C-22

Electrodes: 1.4435 or Alloy C-22, tantalum

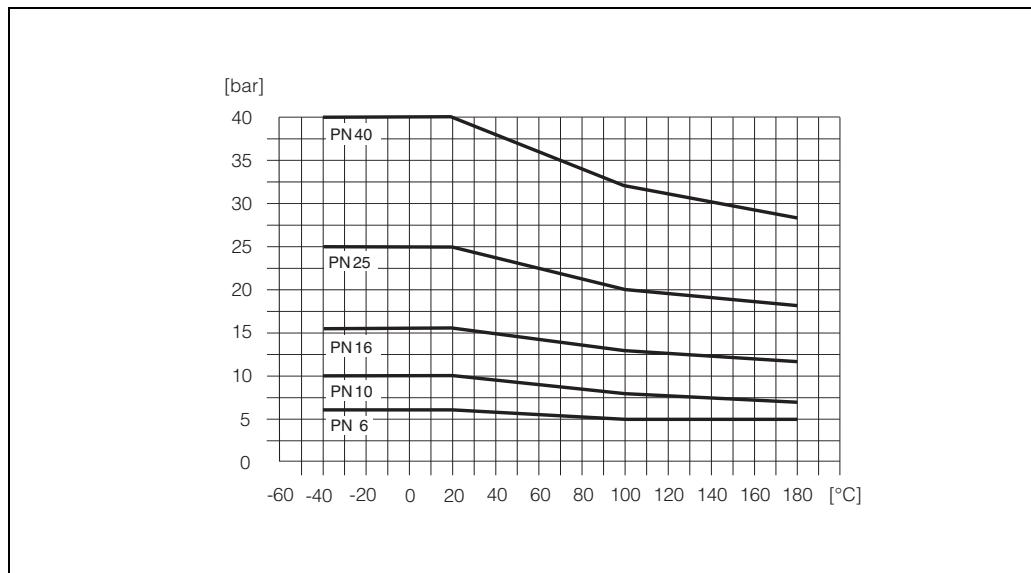

Seals: Seals to DIN EN 1514-1

Material load diagrams**Caution!**

The following diagrams contain material load curves (reference curves) for various process connections relating to the fluid temperature. But the maximal permissible fluid temperature always depends on the lining material of the sensor and/or of the sealing material (Page 20).

Flange connection to EN 1092-1 (DIN 2501)

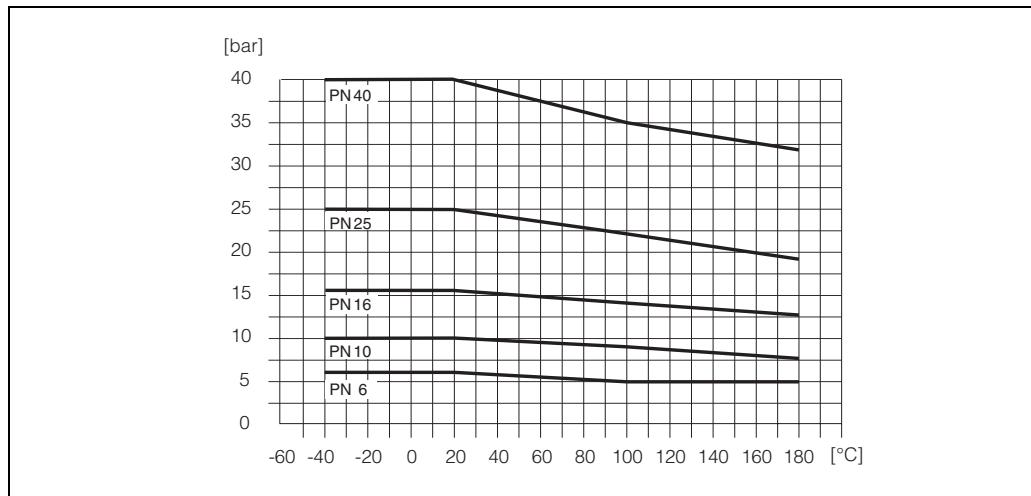

Material: RSt37-2 (S235JRG2) / C22 / FE 410W B

Flange connection to AWWA C 207, Class D

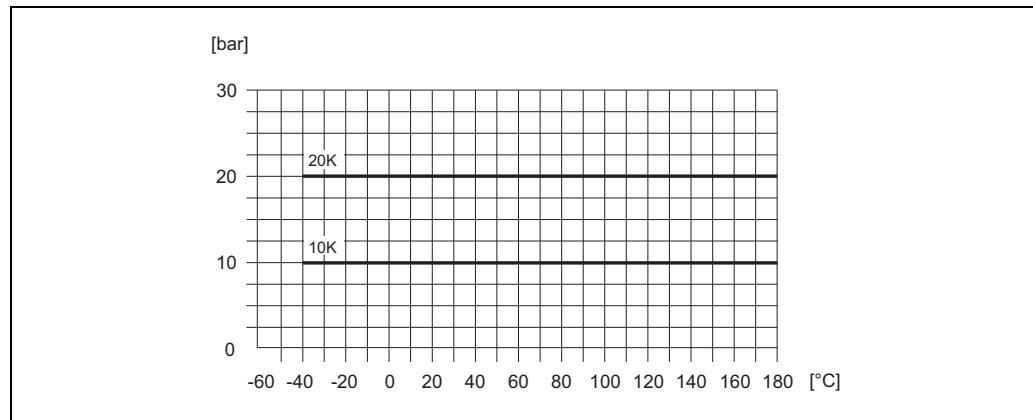

Material: 1.0425

F06-xxFxxxxx-05-xx-xx-xx-004

Flange connection to JIS B2238

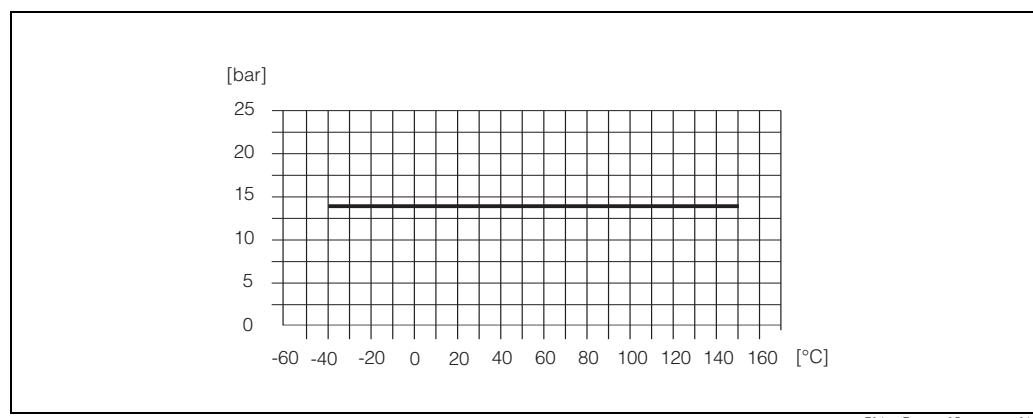

Material: RSt37-2 (S235JRG2) / H II / 1.0425

A0003228

Flange connection to AS2129 Table E or AS4087 Cl. 14

Material: A105 / RSt37-2 (S235JRG2) / St44-2 (S275JR)

F06-xxFxxxxx-05-xx-xx-xx-010

Fitted electrodes

Measuring, reference and EPD electrodes:

- Standard with: 1.4435, Alloy C-22, tantalum
- Optional: exchangeable measuring electrodes made of 1.4435 (DN 350...2000)

Process connection

Flange connection:

- EN 1092-1 (DIN 2501), < DN 350 Form A, > DN 300 Form B
(dimensions acc. to DIN 2501; DN 65 PN 16 and DN 600 PN 16 exclusively to EN 10921)
- ANSI B16.5
- AWWA C 207, Class D
- JIS B2238
- AS2129 Table E
- AS4087 Cl. 14

Surface roughness

- Electrodes:

– 1.4435, Alloy C-22, Tantalum: 0.3...0.5 μm

(all data relate to parts in contact with the medium)

Human interface

Display elements	<ul style="list-style-type: none"> ■ Liquid-crystal display: backlit, two lines (Promag 50) or four lines (Promag 53) with 16 characters per line ■ Custom configurations for presenting different measured-value and status variables ■ Totalizer: Promag 50: 2 totalizers Promag 53: 3 totalizers
Operating elements	<p>Unified operation concept for both types of transmitter:</p> <p>Promag 50:</p> <ul style="list-style-type: none"> ■ Local operation with three push buttons (–, +, E) ■ Quick Setup menus for straightforward commissioning <p>Promag 53:</p> <ul style="list-style-type: none"> ■ Local operation with three optical keys (–, +, E) ■ Application-specific Quick Setup menus for straightforward commissioning
Language group	<p>Language groups available for operation in different countries:</p> <p>Promag 50, Promag 53:</p> <ul style="list-style-type: none"> ■ Western Europe and America (WEA): English, German, Spanish, Italian, French, Dutch and Portuguese ■ Eastern Europe and Scandinavia (EES): English, Russian, Polish, Norwegian, Finnish, Swedish and Czech ■ South and east Asia (SEA): English, Japanese, Indonesian <p>Promag 53:</p> <ul style="list-style-type: none"> ■ China (CIN): English, Chinese <p>You can change the language group via the operating program “ToF Tool - Fieldtool Package.”</p>

Certificates and approvals

Ex approvals	Information about currently available Ex versions (ATEX, FM, CSA) can be supplied by your Endress+Hauser Sales Centre on request. All explosion protection data are given in a separate documentation which is available upon request.
CE mark	The measuring system is in conformity with the statutory requirements of the EC Directives. Endress+Hauser confirms successful testing of the device by affixing to it the CE mark.
C-Tick mark	The measuring system is in conformity with the EMC requirements of the Australian Communications Authority (ACA).
Pressure Equipment Directive	Flow meters with a nominal diameter smaller or equal DN 25 are covered by Art. 3(3) of the European directive 97/23/EG (Pressure Equipment Directive) and are designed according to sound engineer practice. For larger nominal diameter, optional approvals according to Cat. III are available when required (depends on fluid and process pressure).
PROFIBUS DP/PA certification	The flow device has successfully passed all the test procedures carried out and is certified and registered by the PNO (PROFIBUS User Organisation). The device thus meets all the requirements of the following specifications: <ul style="list-style-type: none"> ■ Certified to PROFIBUS PA, profile version 3.0 (device certification number: on request) ■ The device can also be operated with certified devices of other manufacturers (interoperability)
FOUNDATION Fieldbus certification	The flow device has successfully passed all the test procedures carried out and is certified and registered by the Fieldbus Foundation. The device thus meets all the requirements of the following specifications: <ul style="list-style-type: none"> ■ Certified to FOUNDATION Fieldbus Specification ■ The device meets all the specifications of the FOUNDATION Fieldbus H1. ■ Interoperability Test Kit (ITK), revision status 4.0 (device certification number: on request) ■ The device can also be operated with certified devices of other manufacturers ■ Physical Layer Conformance Test of the Fieldbus Foundation
MODBUS certification	The measuring device meets all the requirements of the MODBUS/TCP conformity test and has the "MODBUS/TCP Conformance Test Policy, Version 2.0". The measuring device has successfully passed all the test procedures carried out and is certified by the "MODBUS/TCP Conformance Test Laboratory" of the University of Michigan.
Other standards, guidelines	<p>EN 60529: Degrees of protection by housing (IP code)</p> <p>EN 61010: Protection Measures for Electrical Equipment for Measurement, Control, Regulation and Laboratory Procedures.</p> <p>EN 61326/A1 (IEC 6326): Electromagnetic compatibility (EMC requirements)</p> <p>NAMUR NE 21: Electromagnetic compatibility (EMC) of industrial process and laboratory control equipment.</p> <p>NAMUR NE 43: Standardisation of the signal level for the breakdown information of digital transmitters with analogue output signal.</p> <p>NAMUR NE 53: Software of field devices and signal-processing devices with digital electronics.</p>

Ordering information

The Endress+Hauser service organisation can provide detailed ordering information and information on the order codes on request.

Accessories

Various accessories, which can be ordered separately from Endress+Hauser, are available for the transmitter and the sensor. The Endress+Hauser service organisation can provide detailed information on request.

Supplementary documentation

- Flow Measurement (FA005D/06/en)
- Operating Instructions Promag 50 (BA046D/06/en, BA049D/06/en)
- Operating Instructions Promag 50 PROFIBUS PA (BA055D/06/en, BA056D/06/en)
- Operating Instructions Promag 53 (BA047D/06/en, BA048D/06/en)
- Operating Instructions Promag 53 PROFIBUS DP/PA (BA053D/06/en, BA054D/06/en)
- Operating Instructions Promag 53 FOUNDATION Fieldbus (BA051D/06/en, BA052D/06/en)
- Operating Instructions Promag 53 MODBUS (BA117D/06/en und BA118D/06/en)
- Supplementary documentation on Ex-ratings: ATEX, FM, CSA, etc.
